Granola Clusters	Snacks	92.3%	\$2,878	-0.6	1.4
Kids Bubble Bath	Beauty & Personal Care	96.2%	\$955	-0.5	1.5

Key Findings

In-stock rate of 88.9% is materially below the 95% Walmart vendor benchmark. Nearly 1 in 9 store-item weeks failed. At Walmart's scale, each percentage point of in-stock improvement translates directly to millions in recovered revenue.

Avg WOS of 1.4 is 30% below the 2.0-week target. Every store-item in the sample table shows WOS vs Target of -0.6 to -0.7, confirming this is a chain-wide structural problem, not isolated to specific stores.

Energy Drink 12pk has the highest lost sales at \$19,506 per store. Extrapolated across 500 stores this item alone could represent ~\$9.75M in annual lost sales — making it the single highest-priority replenishment action.

Kids Bubble Bath is the best performer at 96.2% in-stock. Its higher WOS (1.5 vs target) suggests relatively stable demand and adequate replenishment cadence. This item's replenishment model can serve as a benchmark.

Recommendations

- 1 Increase safety stock for Beverages by 20%.**
Energy Drink 12pk and Sparkling Water 8pk together represent the largest lost sales exposure. A 20% safety stock increase would absorb demand volatility during peak weeks.
- 2 Set a WOS early-warning alert at 1.5 weeks.**
The chain-wide average is already at 1.4 — below the alert threshold. Implementing a 1.5-week trigger gives the replenishment team a 1-week window to expedite before a stockout occurs.
- 3 Review case pack sizing for low-velocity store-item combinations.**
Items like Fresh Breeze Softener (82.7% in-stock) in lower-tier stores may be experiencing ordering hesitancy due to minimum case pack quantities relative to weekly velocity.
